

COSC 3337 Checkpoint 1: Proposal

[Application Name]

1. Team Roster

1. [Full name] — [St. Edward's email]
2. [Full name] — [St. Edward's email]
3. [Full name] — [St. Edward's email]
4. [Full name] — [St. Edward's email]

2. Domain and Users

[One paragraph describing the application and the problem it solves.]

Users. Describe each kind of user and what they do in the application.

- **[User type, e.g., Buyer]:** [what they do]
- **[User type, e.g., Seller]:** [what they do]

3. Ten Questions

#	Question	Multi	Agg
1	[e.g., Which items has this seller listed that have received no bids in the past week?]	✓	
2	[Question]		
3	[Question]		
4	[Question]		
5	[Question]		
6	[Question]		
7	[Question]		
8	[Question]		
9	[Question]		
10	[Question]		

4. Data Source

- **Source(s):** [Dataset name and URL, or “generated with Faker/Mockaroo”; mixing is fine]
- **License / terms:** [License, or “N/A – generated”]
- **Expected size:** [Roughly how many records in total, and in the largest tables]

5. Entity Sketch

- **[Entity]:** [key attributes]

- **[Entity]:** [key attributes]
- **[Entity]:** [key attributes]

Relationships:

- [e.g., A seller lists many items; each item has one seller.]
- [e.g., A student enrolls in many sections; a section has many students (many-to-many).]

6. Tech Stack

- **Database:** [e.g., MySQL on a course VM, PostgreSQL on Supabase, SQLite]
- **Application framework:** [e.g., Flask, Express, PHP]
- **Where it will run:** [Course VM / other hosting]
- **Git repository:** [<https://github.com/...>]
